BRIGHTSIGHT

Until recently, keeping projection screen surface clean was no easy job. Stubborn stains cannot be removed using water alone. Using aggressive cleaning products is out of the question, as these irreparably diminish the screen's projection properties. BrightSight is composed of a special mixture of mild cleaning ingredients based on alcohol and is the first cleaning system for projection screens which is both effective and safe.

Simply spray a small amount of freshly fragranced BrightSight on to the screen. Clean horizontally with a clean cloth and you're done. BrightSight removes stubborn stains and ensures that your projection screen remains clean and streak-free for a long time. BrightSight offers ideal protection for every valuable projection screen fabric. With the handy BrightSight 0.5-litre spray bottle, Projecta offers a unique cleaning solution to extend the life of each projection screen. With BrightSight the projection surface can be cleaned after use. Just make sure the material is dry before storing or retracting the surface.
